

BUG TESTING SUMMARY REPORT (FINAL)

Project Name: Nirbachon Surokkha (Mobile Application)

Module: Core System Modules, End-user, Responder & All Oversight Panel Activity

Reference Document: Functional Requirement Specification (FRS)

Date: January 25, 2026

Prepared By: ITO Refat Rahman

Version: 2.0 (Final Release)

1. Executive Summary

This document serves as the formal **Final Testing Summary** for the **Nirbachon Surokkha** (Mobile Application). Following the remediation of defects identified in previous cycles, a comprehensive Full-Process Regression Test was conducted across the entire application ecosystem.

A total of **138 test cases** were executed, covering every user journey from Registration to Central Oversight management. The regression testing confirmed that **all previously failed cases have been successfully resolved**. The application now demonstrates a **100% Pass Rate** across all functional modules, ensuring that critical workflows—including Role-Based Authentication, Responder Actions, and Oversight Reporting—are fully functional and stable.

2. Test Execution Overview

The metrics below represent the final system health status after the complete regression cycle.

Metric	Count	Percentage
Total Test Cases	138	100%
Passed	138	100%
Failed	0	0.0%
Not Executed	0	0.0%

2.1 Regression Testing Status

Scope: Full Application Process (End-to-End)

Status: **COMPLETE & PASSED**

The regression suite covered the full lifecycle of the application to ensure no regression defects were introduced. Special attention was paid to the previously unstable modules (Password Management, Settings, and Registration).

3. Test Coverage Visualization

The bar chart below provides a visual breakdown of the testing effort. It highlights that the most critical and complex modules, such as **Responder (28 cases)**, **End User (22 cases)**, and **User Registration (22 cases)**, received the highest density of test coverage. This distribution confirms that the core operational workflows were rigorously validated and that uniform stability was ensured across all 11 system modules.

4. Module-wise Execution Details

Module / Requirement	Total Cases	Pass	Fail	Pass Rate	Status
Responder	28	28	0	100%	 Stable
End User	22	22	0	100%	 Stable
User Registration	22	22	0	100%	 Stable
Central Oversight Panel	13	13	0	100%	 Stable
Role-Based Auth (Login/Logout)	10	10	0	100%	 Stable
Forgot Password	10	10	0	100%	 Stable
Change Password	12	12	0	100%	 Stable
District Oversight Panel	6	6	0	100%	 Stable
Division Oversight Panel	6	6	0	100%	 Stable
Unauthorized Access	5	5	0	100%	 Stable
Settings Page	4	4	0	100%	 Stable
Total	138	138	0	100%	PASSED

5. Defect Analysis & Resolution

A total of **37 unique defects** were identified and managed throughout the testing lifecycle.

Note: All the bugs shown are now solved

5.1. Defect Status Distribution

Bug Status	Count	Description
Bug Resolved	34	Verified and closed (Fixes deployed).
Feature Not Required/ Decision has not been made yet	3	Items were descoped or removed from requirements.
Not Resolved Yet	0	No open issues remaining.
Total	37	

5.2. Defect Priority Distribution

Priority	Count	Description
High	28	Critical functionality blocked or broken (All Resolved).
Medium	3	Major functionality impaired (All Resolved).
Low	6	Minor UI/UX or cosmetic issues (Resolved or Descoped).
Total	37	

5.3. Resolution of Critical Issues

All high-priority defects identified during testing have been retested and are **Verified Fixed**. The resolutions cover the following functional areas:

- **Authentication & Security:** Fixes applied to User Registration, Login (attempt limits), Password management (strength requirements, visibility, auto-generation, and reset flows), and OTP validation (error messages and expiration timers).
- **Reporting:** Validations corrected for End User Reports (mandatory fields, date/time formatting, voice record uploads) and real-time dashboard updates.
- **User Settings:** Profile picture and address display issues resolved on the Settings Page.
- **Communication:** Video calling functionality and notifications for the Central Oversight Panel are now functional.

5.4. Descoped / Not Required Features

- **Pending Decision:** Validation for user login sessions (BUG-5).
- **Removed/Not Required:** Responder search functionality and specific dashboard report updates for Responders (BUG-20, BUG-21).

6. Conclusion & Release Authorization

The **Nirbachon Surokkha** application has successfully passed the Final Acceptance Testing and Full Process Regression criteria.

Recommendations:

1. **Production Release:** The application is certified for release to the production environment. All blocking issues (High Priority) and functional defects have been resolved.
2. **Post-Deployment Hypercare:** It is recommended to implement a 48-hour monitoring period immediately following release. Specific focus should be placed on the **Registration** and **Media Upload** services, as these modules underwent significant code changes to fix the critical bugs listed above.
3. **Documentation:** This report, along with the updated FRS and RTM, should be archived as the definitive "Version 2.0" (Final) project baseline.
